SPOT[®] PANEL

Postforming Compact

Postforming Compact through a specific process and can be bent into a certain radian, but does not loss of the Compact's advantages. The production which made from Postforming Compact has characteristics of a beauty of wholeness, smooth and seamless surface, good-looking, waterproof, etc. Therefore, it always be the people's first choice.

Compact Panel Gradet

Solid phenolic is constructed with resin-impregnated material compressed under high heat and pressure and covered by a decorative melamine face on both sides. The result is an extremely durable, impact and water resistant material. Phenolic is supplied with melamine surfaces, so it offered in the same, almost limitless color and pattern selections that plastic laminate is. Unlike plastic laminate, however, the phenolic is a solid material, so there is no core material needed, thus eliminating the problem of delamination. This makes phenolic an ideal product for wet, humid applications. Phenolic is also highly impact resistant, making it a good choice for vandalism prone areas. All hardware is heavyduty cast stainless steel.

Application range:

- Toilet Cubical Partition
- Furniture Decoration
- Kitchen Set
- Locker
- Wall Partition
- Top Table
- Etc

Performance Features :

- Shock resistant
- Easy to clean and maintain
- Waterproof
- Damp proof
- Fireproofing
